AMENDMENTS TO THE CLAIMS

(Previously presented) A portal server for a network of computing devices for

aggregating application issue data from a plurality of independent software vendors (ISVs), the

portal server being accessible by one or more application developers of the ISVs via a network

computing device, the portal server comprising:

a data interface for accessing a plurality of application issue data sources for obtaining

application issue data regarding one or more applications associated with each of the ISVs;

a network interface accessible by each of the one or more application developers; and

an aggregation module for aggregating the application data by application and for

presenting to each of the one or more application developers via the network interface a

customizable user interface that presents aggregated data regarding only the one or more

applications associated with that ISV and omitting application data for applications not

associated with that ISV.

1.

2. (Previously presented) The portal server according to Claim 1, wherein the

aggregation module is further operable to prioritize the application data according to at least one

criterion at the request of an application developer.

3. (Previously presented) The portal server according to Claim 2, wherein the at

least one criterion includes one or more criteria selected from the group consisting of issue ID,

application name, application version, issue type, issue priority, operating system, and number of

issue reports per issue.

4. (Previously presented) The portal server according to Claim 1, wherein the

plurality of application issue data sources comprise a database of logo certification test results

performed on at least one application by a party other than the application developer and a

database of user-reported computer crash data.

-2-

5. (Previously presented) The portal server according to Claim 4, wherein the

plurality of application issue data sources further comprise an additional database of application

experience test data.

6. (Previously presented) A web portal user interface for presenting application

issue data to a user comprising:

a search pane for user entry of at least one search term, whereby entry of at least one

search term coupled with a run command will cause a search to be executed of aggregated

application issue data; and

a task pane for user selection of a format for display of application issue data; and a

content pane for display of application issue data.

7. (Original) The web portal user interface according to Claim 6, wherein the user is

an application developer of one or more applications, and the application issue data available to

the user in the content pane relates to those one or more applications and omits data related to

applications other than the one or more applications.

8. (Original) The web portal user interface according to Claim 7, wherein the task

pane contains a listing of available formats.

9. (Original) The web portal user interface according to Claim 8, wherein the listing

of available formats comprises a summary format.

10. (Original) The web portal user interface according to Claim 9, wherein each

application issue has associated therewith number of reports of that issue, and wherein the

summary format comprises a graphical illustration of the number of reports associated with each

of a subset of application issues, each application issue in the subset having associated therewith

more reports than any of the remaining issues not in the subset.

-3--

11. (Original) The web portal user interface according to Claim 8, wherein the listing

of available formats comprises a format wherein each of the one or more applications is listed

and is visually associated with information regarding application issues for that application.

12. (Original) The web portal user interface according to Claim 11, wherein the

information visually associated with each of the one or more applications comprises an

indication of the total number of issues associated with that application.

13. (Original) The web portal user interface according to Claim 12, wherein the

applications issues each have one of a plurality of types, and wherein the information visually

associated with each of the one or more applications comprises an indication of the number of

issues of each type associated with that application.

14. (Original) The web portal user interface according to Claim 11, wherein the

information visually associated with each of the one or more applications comprises an

indication of the total number of issues associated with that application when used in conjunction

with an indicated operating system.

15. (Original) The web portal user interface according to Claim 8, wherein the listing

of available formats comprises a format wherein all application issues associated with the one or

more applications are presented.

16. (Original) The web portal user interface according to Claim 15, wherein each

application issue has an identifier, and wherein within the format wherein all application issues

associated with the one or more applications are presented, the application issues are grouped by

application issue identifier.

17. (Original) The portal according to Claim 6, wherein the search pane comprises

selectable search filters.

18. (Currently amended) A method of presenting application issue data regarding one

or more software applications to a developer of the one or more software applications

comprising: gathering application issue data from a plurality of data sources;

aggregating application issue data such that application issues pertaining to the same

application are grouped together; and

presenting the aggregated application issue data visually to the developer of the one or

more software applications by providing a user with selectable control for altering the order in

which the application issues are presented.

19. (Original) The method according to Claim 18, wherein gathering application

issue data from a plurality of data sources comprises gathering the application issue data from a

database storing at least one item of user crash report data and a database storing at least one

item of test report data.

20. (Canceled)

21. (Currently amended) [[The]] A method according to Claim-18, wherein of

presenting application issue data regarding one or more software applications to a developer of

the one or more software applications comprising: gathering application issue data from a

plurality of data sources;

aggregating application issue data such that application issues pertaining to the same

application are grouped together; and

presenting the aggregated application issue data visually to the developer of the one or

more software applications comprises by presenting a subset of the data in a visual page and

presenting a user-selectable page control for accessing one or more pages of remaining data.

22. (Original) A computer-readable medium having stored thereon computer-

executable instructions for performing the method according to Claim 18.

23. (Currently amended) An apparatus for presenting application issue data regarding

one or more software applications to a developer of the one or more software applications

comprising:

means for aggregating application issue data such that application issues pertaining to the

same application are grouped together;

means for gathering application issue data from a plurality of data sources; and

means for presenting the aggregated application issue data visually to the developer of

the one or more software applications by providing a user with selectable control for altering the

order in which the application issues are presented.

24. (New) An apparatus for presenting application issue data regarding one or more

software applications to a developer of the one or more software applications comprising:

means for aggregating application issue data such that application issues pertaining to the

same application are grouped together;

means for gathering application issue data from a plurality of data sources; and

means for presenting the aggregated application issue data visually to the developer of

the one or more software applications by presenting a subset of the data in a visual page and

presenting a user-selectable page control for accessing one or more pages of remaining data.

25. (New) The method according to Claim 21, wherein gathering application issue

data from a plurality of data sources comprises gathering the application issue data from a

database storing at least one item of user crash report data and a database storing at least one

item of test report data.
